ESSENCE OF SUSTAINABLE

We create and deliver cutting edge custom sustainable homes.

Our architecture is inspired by subtropical passive design principles which embrace individual site orientation, maximising passive opportunities, minimising costs, uses new and innovative building techniques.

We design and build sustainable homes that are inspirational and timeless.

bringing the built environment to life

CUSTOM DESIGN

The definition of the word “sustainable” is to “keep in existence, prolong, and maintain”. We can no longer view housing stock in Australia as disposable, as though it has little material, cultural or emotional value.

Livable

CONSTRUCTION

The reason we're able to deliver workable homes and buildings is because our in-house design team are heavily involved in, and thoroughly understand, the construction process

Turnaround

Aesthetically
Minded

Recipe Housing is a unique, design and building approach by Sustainable Pty Ltd. It considers elements of the building site and unique building pods as “ingredients” for truly sustainable homes. Just like a food recipe, Recipe Housing adapts the ratios of site and design ingredients to respond to each site and client requirements.

RETROFIT

Sustainable can retrofit an existing home to make it more liveable, enjoyable and importantly sustainable. We work with the environment to retrofit a cool, bright, energy efficient place to live.
